

Texecom has you covered with a future ready solution to ensure you're always safe and secure

Act now – your security system will be affected

Telephone lines across the UK and Ireland are in the process of moving from analogue PSTN lines to digital IP services.

What does this mean?

Communication providers are upgrading their telephone services across the UK and Ireland with plans to migrate to a fully digital phone service by the end of 2025.

Don't be left unprotected

The move to IP has already begun, with premises nationwide already affected. Make sure your alarm will continue to operate by moving to IP signalling today.

Texecom Monitor : *Seamless and integrated IP signalling for Texecom Premier Elite alarm systems*

Texecom Monitor offers single path (IP or 4G) or dual path (IP and 4G) signalling to leading Alarm Receiving Centres (ARCs) using standard Texecom equipment.

This makes upgrading Texecom Premier Elite systems to all-IP signalling plug and play, making it easy for your installer to upgrade your system to the latest digital signalling.

Seamless and Integrated

Texecom Monitor is built-in, not bolted on. With Premier Elite systems being fully integrated with SmartCom communicators and Texecom's Cloud communications network, installations become plug & play, making it easy for your installer to upgrade your system to the latest digital signalling.
